

INNOVATIVE DENTAL CLINIC

# Automation of the Dental Practice

# Starting point:

## Handling times

Long processing times have led to inefficiencies, causing frustration for both staff and waiting patients.

## Organizational difficulties

The scheduling of appointments was complex and time-consuming, leading to frequent overlaps and cancellations by patients.

## Patient restrictions

The practice faced limitations in the number of patients it could manage, potentially reducing revenue and overall customer satisfaction.

## Specific objectives

The main objectives included reducing management times, increasing appointments, and improving the overall patient experience.

# Automation intervention

## Methodology and Solutions

Automation involved the implementation of management software and an automatic booking system, improving efficiency and communication with patients.

# Results and Testimonials

## Increase in Appointments

Appointments increased by 40% in the first 60 days.

## Increase in Patients

The number of patients increased by 30% after automation.

## Time reduction

Management times have been reduced by 50% thanks to efficiency.

# Lessons Learned

Reflections and advice for other dental practices

The integration of technology into dental processes has proven to be fundamental in improving the efficiency and quality of the service offered to patients.
